The corporate manager, the shareholder and the corporate lender all stand to gain by a better understanding of the mechanisms by which earnings are generated and of the patterns of earnings associated with particular circumstances. This knowledge could be used to make more profitable strategy decisions in the firm and to forecast more accurately future earnings. For example, a better understanding of the patterns of earnings would lead to more accurate forecasts of future earnings and to more accurate valuation of firms. This, in turn, would allow the investor to more accurately estimate personal wealth. Several possible explanations of the effect are offered and each is discussed in the context of supporting or discrediting evidence found in the research literature.
