Excerpt: . . . water to reduce salt accumulation. Ten times during the experiments leachates were collected and analyzed for pH and heavy metals. The plants were harvested on 23 April 1996, rinsed in deionized water, and separated into shoots, crowns, and three root samples from the three soil zones. The plant material was frozen until ready for analyses. Leachates were analyzed for Zn, Pb, Cu, Cd, and pH. Samples were refrigerated after sampling, but were not filtered. There was no visual evidence for any significant movement of suspended material or organics as judged by settling out of suspension or discolored solutions. Working standards for heavy metals were prepared Figure 2. Water content of untreated soil-asphalt tar from 1000-ppm Fisher primary standards. A and laboratory and field DCR-treated material.
